

MADDURU ASHRITHA

B.E. CSE (AI & ML)

Bangalore, Karnataka, India
madduruashritha31@gmail.com
+91 9059051400
linkedin.com/in/madduru-ashritha
github.com/madduruashritha

SKILLS

Programming
Python, C

AI & Machine Learning
AI Fundamentals
Machine Learning Concepts
Generative AI

RAG Models
LLM Applications

Tools & Technologies
VS Code, GitHub, MySQL

Core Skills
Problem Solving

Application Development

CERTIFICATIONS

- Artificial Intelligence Fundamentals
  IBM SkillsBuild (Oct 2025)
- Introduction to Artificial Intelligence
  Infosys Springboard (Jul 2025)
- C Programming Course
  Infosys Springboard (Jan 2025)
- EY-Microsoft AI Skill Passport
  EY (Jun 2026)
- Machine Learning A-Z: AI, Python
  Udemy (Jan 2026)

INTERESTS

- Artificial Intelligence
- Machine Learning
- Generative AI
- Entrepreneurship

PROFESSIONAL SUMMARY

B.E. Computer Science & Engineering student specializing in Artificial Intelligence and Machine Learning, with hands-on experience in Python, machine learning concepts, generative AI, and application development. Built projects involving LLM-based recommendation systems, graph algorithms, and automation. Passionate about building practical AI solutions and exploring opportunities in AI/ML and generative AI.

EDUCATION

Bachelor of Engineering (B.E.) – Computer Science & Engineering 2024 – 2028 (Expected)
RV Institute of Technology and Management, Bangalore
Specialization: Artificial Intelligence & Machine Learning

PROJECTS

LILA – AI-Powered Personalized Travel Recommendation Platform | React, FastAPI, LangChain, ChromaDB, Groq

- Built a full-stack AI platform that generates personalized travel recommendations using an LLM-backed RAG pipeline over a vector database.
- Integrated live hotel and events data to provide real-time, relevant recommendations.
- Designed an interactive interface to deliver travel plans in a natural, conversational format.
- Deployed the application on Vercel.
- Presented the project live to a panel of judges in a viva format, focusing on natural, conversational answers.

Course Scheduling System | Python, Graph Algorithms, Render

- Built a course scheduling system using graph theory and algorithmic techniques.
- Implemented cycle detection using 3-color DFS and topological sort to determine valid course ordering.
- Used BFS-based semester grouping for optimized scheduling.
- Worked on conflict detection and deployed the application on Render.

Food Order Management System | C

- Developed a console-based application to manage food orders and billing.
- Implemented structured programming concepts and user input handling.
- Designed features to manage multiple food orders and generate bills.

TRAVAI – Python Mini Project | Python

- Built a Python-based application focused on automation and basic AI logic.
- Worked on data handling and problem-solving using Python.
- Implemented core features to automate tasks and improve user experience.

CAREER INTERESTS

Artificial Intelligence, Generative AI applications, Machine Learning, RAG Models, Entrepreneurship.
